RAHMATHULLA K

Chennai, India | +91 9080317112 | rahmathself@gmail.com | LinkedIn | GitHub

SUMMARY

Full Stack Developer with 3 years of experience building payroll and finance applications using Angular, Python, FastAPI, Laravel, and MySQL. Owns features from proof of concept through development, frontend integration, and deployment. Experienced in SQL optimization, event-driven AWS workflows, and AI-powered microservices, including LLM document processing, similarity matching, and RAG applications.

TECHNICAL SKILLS

Programming Languages: Python, PHP, TypeScript, JavaScript, SQL
Frameworks & Libraries: Angular, FastAPI, Laravel, LangChain, Pandas, NumPy, Scikit-learn
Architecture & APIs: Microservices, Event-Driven Architecture, REST APIs, JWT, Webhooks
Databases: MySQL, MongoDB, Redis, Pinecone
Cloud & DevOps: AWS (Lambda, S3, SQS, SNS, SES, IAM, EC2, Bedrock, Textract), Docker, Git, CI/CD
Kubernetes: Basic hands-on experience with pod deployment, Ingress routing, and kubectl troubleshooting
AI/ML: LLM Structured Output, RAG, Embeddings, Vector Search, Nearest-Neighbor Similarity, Fuzzy Matching

PROFESSIONAL EXPERIENCE

Senior Software Engineer | MyDigital Accounts | Chennai | Mar 2026 – Sep 2026

- Built a LangChain-powered FastAPI microservice using AWS Textract, LLMs, and Pydantic structured output to extract scanned timesheet data for invoice generation, reducing manual entry while retaining human review.
- Developed a RAG knowledge-transfer chatbot using internal technical documentation; evaluated retrieval and response quality before production deployment to support onboarding and handovers.
- Developed a Python net-wages matching engine using nearest-neighbor similarity and fuzzy matching, deployed on AWS Lambda with S3 integration, reducing manual matching effort by approximately 5 hours.
- Automated allocation of rule-matched transactions using bulk SQL, processing 50,000+ transactions in under 30 seconds and replacing manual batches of 200.

Software Engineer | MyDigital Accounts | Chennai | Sep 2023 – Mar 2026

- Delivered end-to-end payroll and finance features using Angular, Laravel, and MySQL, covering requirements, backend APIs, frontend integration, and production support.
- Expanded bank transaction imports from a 5K-record limit to 50K+ records using SQS-triggered AWS Lambda for rule-based matching, S3 for processed output, and webhooks for application notification and import.
- Automated accrued-salary reconciliation with an Angular interface, scheduled backend processing, MySQL CTEs, date-range filtering, and Excel exports, saving 4+ hours per reporting cycle.
- Built a cash-matching engine combining fuzzy matching and Google OR-Tools for one-to-many transaction matching, replacing manual comparisons and saving half a day per cycle.
- Implemented route-level lazy loading for Angular finance modules to load feature code on demand and reduce the initial loading workload.

Software Engineer Intern | MyDigital Accounts | Chennai | Jan 2023 – Aug 2023

- Developed a functional replica of the company application, implementing key business workflows and features.
- Identified and fixed a file-upload security issue by adding MIME-type validation to restrict unsupported file types.

EDUCATION

B.Tech, Computer Science Engineering | SASTRA University | 2019 – 2023 | CGPA: 7.5
